

PATHFUND

WHITEPAPER V1

Legal Disclaimer

INVESTMENTS IN CRYPTO (DIGITAL) COINS/TOKENS ARE SUBJECT TO MARKET RISK. PLEASE READ THE DISCLAIMER/PRIVACY POLICY CAREFULLY.

This website and information contained herein may not be sent or addressed wholly or in part, directly or indirectly to any person in a jurisdiction in which it would be impermissible or otherwise restricted to offer, distribute, sell, purchase or retain cryptographic token/coin.

This is a conceptual website describing the PathFund project and PATH token. It may be amended or replaced at any time. This Website does not constitute investment, legal, tax, regulatory, financial, accounting, or other advice. Before acquiring the PATH tokens, a prospective purchaser should consult with his/her legal, investment, tax, accounting, and other advisors to determine the potential benefits, burdens, and other consequences of such a transaction.

The information is provided by PathFund and while we endeavor to keep the information up to date and correct, we make no guarantees or representations of any kind about the completeness, accuracy, reliability, availability, or suitability concerning the website or information, services, or graphics contained on the website for any purpose. Therefore, any reliance placed on such information is strictly at your own risk.

In no circumstances, we will be liable for any loss or damage incurred either directly, indirectly, or consequentially in connection with the use of our website. We do not offer or provide any investment or financial advice and no publication or whatsoever on the website must be considered as investment advice.

The information contained on our website is not meant as a recommendation or a solicitation to buy or sell any product, service, security, or investment. One must seek advice from a professional financial advisor and do independent research before making any investments and must not rely solely on the information provided/published by PathFund.

The information on this site or in any communication with a link to this site is not for use by, or distribution to any person or entity in any jurisdiction or country where such use or distribution would be contrary to law.

We make every effort to keep the website up and running smoothly. However, PathFund takes no responsibility for, and will not be liable for, the website being temporarily unavailable due to technical issues which are beyond our control.

This website is not composed under and is not subject to, laws or regulations of any jurisdiction which prohibit or in any manner restricts transactions in respect of, or with use of, digital tokens.

No representations or warranties are made as to the accuracy or completeness of the information, statements, opinions, or other matters described in this website or otherwise communicated in connection with the project.

Nothing in this website is or should be relied upon as a promise or representation as to the future.

The PathFund Token (PATH) is not intended to constitute:

1. Securities in any jurisdiction,
2. Currency of any kind,
3. Stocks, shares, or debentures,
4. Units in a collective investment scheme or business trust,
5. Equity in an investment fund.

Any regulation or legislation applicable to securities or any of (1 to 5) above will not apply to this website. This website has not been approved by any regulatory body in any jurisdiction.

This website does not comply with any laws, regulations, or legislation of any jurisdiction.

The purchase of the PATH token is inherently risky. No warranty, guarantee, or undertaking is made by PathFund and/or the distributors of the PATH regarding:

1. The performance of the PATH.
2. The accuracy of the information contained on this website.
3. The accuracy of the financial or other projections contained in this website.

The lack of clarity surrounding the law and regulation of purchasing, holding, selling and trading of digital tokens in many countries further increases the risk associated with the PATH purchase. As a potential purchaser, it is assumed that you have familiarized yourself with the underlying technology and workings of token purchases, blockchain technology, digital wallets, and cryptocurrency.

It is assumed that, as a potential purchaser, you have knowledge and understanding of the foregoing and that you have familiarized yourself with the risks associated therewith.

1. Introduction

As the cryptocurrency market continues to grow at a tremendous rate, new tokens are emerging every single day. A glance at the recent data reveals that nearly 4900 blockchain-based tokens entered the market since September 2020 with countless memes & other tokens being created every day. Such phenomenal growth in the industry is sure to be followed by several scams. More tokens also correspond to a higher possibility of scams.

The safety of investors has always been a major issue whether it's investing in a debut token or trading via exchanges or even storing tokens in a wallet. As we embark upon the journey towards decentralizing finance, many will create products and services that will continue to flourish for millennia. However, we grapple with the fact that many of these projects are designed to defraud investors, either intentionally or accidentally. The scam rate on BSC is increasing in a continuous and accelerated fashion.

As cryptocurrency adoption continues to grow, the need for measures to be taken becomes more obvious by the day. This is because there are constantly new crypto adopters entering this concept without fully understanding the practices and technical aspects. In addition, there are the fundamentals of blockchain as a whole.

Launched on 16th May 2021, PathFund is a project focused on delivering crypto-based solutions in the decentralized blockchain world. Our initiative is to build and make available to investors a secure and friendly ecosystem with an intuitive interface. This will make the interaction between an individual and the crypto world easier.

2. Mission Statement

The cryptocurrency market scam rate reached an all-time high in 2021. From money laundering to scam ICOs, the loss amount in 2021 has surpassed that of the year 2019 when a record of 4.5 billion dollars was hit. With such a booming market, one cannot ignore the severity of this situation. Where there is money and a growing market, there are bound to be people who will try to rip off investors' hard-earned money. Only in the first half of 2021, Australians fell victim to crypto scams worth more than \$25 million. The number remains much higher worldwide. Concerning the Defi market, rug pulling has been responsible for \$113 million in losses as of July 2021. The scams can never be eliminated, but they can always be mitigated to a degree that doesn't make much difference.

PathFund is designed to undermine such scams and pulls in the cryptocurrency industry and restore the sense of security amongst users and investors. In addition to providing customized and secure decentralized services, we strive to provide a friendly and safe environment for our users. PathFund's main focus lies on the development of its signature product, the "PathLaunch" followed by multiple products such as "PathExchange" & "PathWallet", the possibilities being endless.

During the development phase of our products, we will endeavor to provide educational content to the end-user so they can become familiar with investment opportunities and develop the skills they need to identify and determine which projects are a suitable fit.

Moreover, we will offer services in the areas of mentoring, incubation, and sponsorship to help develop potential projects that will have a positive impact on the crypto world and/or will have real-world integration, thereby giving the cryptocurrency a more positive connotation.

3. Signature Product (Native Cryptocurrency Launchpad)

3.1. About Cryptocurrency Launchpads

The majority of start-ups conducted their token sales directly on their website in 2017 and earlier, distributing tokens to investors who purchased the token at a specified price. The process was known as an initial coin offering (ICO), and investors held the token until it was listed on an exchange.

In the wake of the crypto market crash and the 99% scam rate of ICOs, investors became wary of such projects. Many novice investors were investing money into literally anything that looked flashy because they did not have the knowledge and expertise needed to examine new crypto projects.

During this time, crypto exchanges were quick to grab the advantage of the revenue opportunity. As part of their job, they would research many new projects, and based on the findings, partner with them to conduct token sales on their exchange platform.

Since the exchange already had users and investors looking for new projects, the method worked. The vetting process used by the exchange also reduced the risk of investors investing in apparent scams.

On crypto exchange platforms like Binance, the new method of offering tokens for sale was known as initial exchange offerings (IEO), and the platform used to do so was called launchpad.

The recent emergence of decentralized exchanges (DEXs) also allows investors to purchase new crypto projects. The process of selling tokens on a DEX is called an initial DEX offering. Launchpads are the platforms or services DEXs use to do so.

In short, a crypto launchpad is any platform that allows you to buy tokens before they are publicly released to raise funds for upcoming crypto projects.

3.2. PathLaunch

PathFund's vision is to mitigate ICO scams by creating the first pre-auditing, self-sustaining token launchpad (PathLaunch) which will also sponsor the projects it launches. We will, therefore, guarantee investors' safety in addition to providing steady growth for our announced projects.

PathLaunch is our signature product which will act as a decentralized consulting platform for ICO participants, investors, and experts. We not only take into account buyers' safety but also fund the listed projects for marketing campaigns and other endeavors from our Funding wallet.

The main issues that most of the potential holding projects face during the launch are:

1. Insufficient funding.
2. Having trouble gaining the trust of investors.
3. Marketing and reach are limited.
4. Lack of guidance and therefore unable to decide how to proceed.
5. No access to consultations or advisory services from experts.
6. There are no affiliations with marketing agencies or influential persons in the crypto-space.

PathLaunch aims to eliminate all these problems by providing its listed projects not only with adequate funding for marketing campaigns and a large audience but also with all the necessary information and database to ensure the smooth journey by leading them on the right 'PATH'. Furthermore, it boosts the project's trust factor after passing the rigorous verification and auditing processes. Moreover, by utilizing smart contracts, funds will be locked and stored securely on our platform, ensuring reliability and security. The launchpad (PathLaunch) system will be completely legal and will pass all the basic requirements of various sites.

3.3. Staking and Tiers

The access to projects listed on PathLaunch will be granted based on staking tiers. Each staking tier will require a minimum amount of PATH to be staked, with each rising level offering new benefits.

Presales will have 2 stages:

Stage 1 - Allocation based on a tier system.

Whitelisting is required to obtain presale access. Once whitelisted, access will be granted based on the tokens staked & tier assigned. Tokens can then be purchased at presale prices. Any unsold tokens from this stage will be available for sale in Stage 2.

Stage 2 - Allocation for all PathFund holders (if there are any unsold tokens from Stage 1)

Stage 2 will feature the unsold tokens from stage 1, where those who own a certain number of PATH tokens will be able to participate at presale price on a first-come-first-serve basis.

Upon conclusion of both stages, the tokens will be distributed and the liquidity pool locked automatically.

(More information on Staking amounts, Tiers, and allocation will be made available before launch)

4. Other Products (Native Cryptocurrency Exchange & Wallet)

4.1. PathExchange

Despite the prevalence of centralized exchanges (CEXs), decentralized exchanges (DEXs) are gaining popularity. DEXs utilize automated smart contracts to execute trades without an intermediary. A decentralized exchange eliminates the need to depend on third-party services, and data shows that over the past several years, such third-party services have been hacked, resulting in users losing funds and trust. Besides the credibility, there is no server down issues since the hosting of decentralized exchanges is distributed among the nodes involved.

PathExchange is a native decentralized cryptocurrency exchange of PathFund, which will facilitate peer-to-peer cryptocurrency trading between buyers and sellers. We will typically employ liquidity pool protocol to determine asset pricing. The purpose of liquidity pools, which are pools of tokens locked in smart contracts, is to attenuate the problems caused by illiquidity that plague decentralized exchanges. The liquidity pools are funded by other users who earn passive income on their deposits through trading fees based on the percentage of the liquidity pool that they provide.

Utilizing liquidity pools offers the benefit of preventing the need for a buyer and a seller to decide to swap assets at a given price, as the assets are instead leveraged based on a pre-funded liquidity pool. This ensures that even the most illiquid trading pairs can be transacted with limited slippage, provided the liquidity pool is big enough.

Enabling smart contracts, liquid pool protocol, and automated market-making on PathExchange will make it possible for our users to trade crypto tokens and provide liquidity in a much more efficient way. Therefore, creating a trustless and secure way of transacting and trading in the modern digital asset market.

Using Binance's Smart Chain, PathExchange will be able to provide substantially lower fees and faster transactions. To make the platform as intuitive as possible, the overall interface will be designed to provide a seamless trading and investment experience for anyone, no matter how little knowledge they have about decentralized exchanges.

By addressing all issues that other decentralized exchanges are currently facing and by ensuring the security of users and investors, PathExchange will be able to adhere to its overall strategic goal.

(Whitepaper versions to follow will reveal more details)

2. PathWallet

Cryptocurrency wallets are digital or hardware wallets that store your private keys, keeping your crypto safe and accessible. In addition to storing your crypto, they also allow you to send, receive, and spend it.

Theoretically, a crypto wallet does not store your coins. Your holdings reside on the blockchain, which you can only access using your private key. The private keys prove your ownership of your digital money and enable you to make transactions. If you lose them, you lose access to it. Therefore, using a trusted wallet provider to protect your digital money and not compromise security in any way is crucial.

The major issues encountered by cryptocurrency wallets at the moment are:

1. Security issues
2. Oversaturation results in a slow rate of transactions
3. The overall interface is not user-friendly, making interaction with the market and storing coins difficult for newcomers.

4. Increased transaction fees.

PathFund anticipates addressing and fixing all such problems and creating a secure, convenient, and accessible way to store and transact cryptocurrencies through PathWallet.

PathWallet is PathFund's native cryptocurrency wallet. With PathWallet, users can encrypt and store their private keys, spend digital currency, and access their digital assets. PathWallet may integrate with PathLaunch and PathExchange to make it easier for users to stake and trade their digital assets as needed.

PathWallet in its early phase will be an online wallet with a perfect blend of contemporary technology and futuristic features guaranteeing seamless transactions and ensuring the safety of the users. To provide higher levels of security and convenience for storing digital funds, PathFund also plans on developing a hardware wallet at the later stages.

(Whitepaper versions to follow will reveal more details)

3. Endless Possibilities

PathExchange and PathWallet development/integration with PathFund will only be the tip of the iceberg. Having a firm business model, tokenomics, smart contracts, and a community of committed users, the expansion possibilities are limitless. In time, PathFund aims to cover all the major aspects of the cryptocurrency market and provide uninterrupted services to end-users around the world without compromising on security or accessibility. All products will be legally registered under relevant jurisdictions and launched only after thorough testing & audits.

The PathFund roadmap and business model will be updated as new development requirements and new business opportunities arise. For such business approaches and products, PATH will be used as a native token. Thus, giving it a wide range of applications in this growing market (possibilities being endless). As the platform currency for the PathFund business module, it will be the focus of product development.

2. Internal Products

5.1. PathTrack (Track your Reflections)

PathTrack is an internal product made available by PathFund on its website that allows investors to monitor their holdings and reflections by simply entering their wallet addresses. The following information is available through PathTrack:

- Wallet Information
 1. PATH Holdings
 2. PATH Holding (in dollars)

- Reward Status
 1. Token Reflections

2. Token Reflections (in dollars)
 3. All-time Reflections (shows the total reflections received from the start)
 4. Dollar All-time Reflections (shows the total reflections received from the start in dollars)
- Market Information
 1. Current price of PATH
 2. Current Market Cap
 3. Number of PATH tokens Burnt
 4. Current circulating supply
 - Transaction Information
 1. Number of tokens bought
 2. Number of tokens sold
 3. Invested/bought tokens (in dollars)
 4. Paid-out/sold tokens (in dollars)

By clicking on the "Revise" button located at the bottom of the wallet address, you can update your snapshot with your current holdings, resulting in zero reflections. This does not affect all-time reflections and does not mean that your holdings are zero.

This safe, secure, and free service available via PathTrack collects the data from BSCScan and does not require investors to enter any other information apart from their wallet address, thus ensuring complete security and preventing any vulnerabilities from occurring.

2.2. PathMerch (Branded Merchandise)

PathMerch is an online store that will be accessible through our website. Through PathMerch, our community will be able to order PathFund branded merchandise, which will not only support the PathFund initiative but also help spread the word.

There will be a collection of PathFund merchandise to choose from including caps, t-shirts, hoodies, and much more. We also plan to offer something special to the "PathLegends" in the future as a way of expressing our deep appreciation for their undying support.

Recent studies indicate that 85% of people do business or engage with an advertiser after receiving a promotional item, so we want to use the PathFund merchandise as a branding exercise and promotional material. Our goal is to build a community around our branded merchandise motivating our customers and audiences to engage and promote PathFund. Branded merchandise is a great long-term branding initiative when implemented properly.

6. About PATH Token

PATH is a decentralized digital currency built on the Binance Smart chain (BEP-20) platform which uses smart contracts & tokenomics to reward its holders as well as provide exclusive access to pre-sales of projects launching on PathLaunch. The total supply of PATH is 1 quadrillion tokens (1,000,000,000,000,000 PATH).

The distribution of the released tokens is as follows:

Presale allocation: 30%
Burn: 20%
Liquidity: 19%
Project development: 15%
Partners and consultants: 10%
Marketing: 6%

Development & team wallets are locked separately for one year (have been locked separately but have been merged by DxLock for the locking period).

Each one of them will have 10 vests over the next 12 months; a vest every month and a few days.

The liquidity through DxSale is locked up for one year because:

1. We're looking forward to locking it through our platform for a longer period.
2. In the future, if we want to migrate the contract or improve it, we can do so within a year.

1. PathFund Tokenomics

As a new concept, tokenomics or token economy is the concept of studying, designing, and implementing an economic system using a token to create a self-sustaining monetary system as a means to reward specific behaviors within a community.

To sustain the project and reward holders, PATH uses tokenomics and operates with a total tax of 9% on every transaction. Each buy or sell order is subject to a 9% tax that is divided/utilized as follows:

1. 1% is added to the funding wallet which is used for marketing, development, and sponsoring of the projects that launch of PathLaunch.
2. 5% is automatically added to the liquidity pool.
3. 3% is distributed amongst the holders. Reflections received by the holders depend on the number of tokens they hold.

A PATH investor who purchases 100 \$ worth of tokens will only receive 91 \$ worth of tokens in their wallet after a deduction of 9% tax levied on transactions. This not only makes PathFund self-sustaining but also incentivizes PATH holders.

2. Automatic Burn Integration

PathFund was launched with a total supply of 1 Quadrillion tokens. However, 20% of the total supply, or 200 trillion tokens, was burned at launch as a result of a burn event. Thus, the total supply has been reduced to 800 trillion tokens. Since the burn wallet is one of the holder wallets, it is eligible to receive reflections from each transaction, just like the others. With this, PathFund can automatically burn tokens with every transaction on the chain in the form of reflections received in the burn wallet. Therefore, creating an Auto-Burn Mechanism.

PathFund has no plans to host an external burn event other than already operational Automatic Burn Integration at the moment. However, it can be considered as a possibility in the future.

3. Advantages/Benefits of owning PATH Tokens

For supporting and placing their trust in us, we plan to reward and provide our unobstructed services to the PATH owners. Following are some of the benefits and advantages for owners:

1. Constant growth in the value of Tokens: Due to its deflationary nature, PATH's value will constantly increase with every transaction.
2. A complete protection against scam ICOs: through pre-auditing, KYC checks, and tokenomics analysis, safety will be ensured.
3. We guarantee steady and organic price growth through constant awareness and marketing of PathFund.
4. Earn Passive Income: The holders of PATH are entitled to 3% of all transactions. So, you can earn passive income just by holding PATH.
5. Locked Liquidity for 1 year: PathFund has locked its liquidity pool for 1 year through DXLock to establish a trusted ecosystem. Liquidity will be locked for an additional 10 years through our platform after this period ends.
6. Privilege: PATH holders will have exclusive access to pre-sales of all the projects selected for our launchpad.
